Work Experience

Nabla — **Paris, France (Hybrid)**
Software Engineer | Healthcare AI — Sep 2026 – Present
- Building AI-powered tools that cut clinicians' admin work on the Core API and Nabla Connect teams, using **Kotlin** and **React**.

GoGoStudio — **Remote, France**
Founder | Independent Game Studio & Software Consulting — Oct 2026 – Present
- Developing my own games, like **Goddle**, a multiplayer word game in **Godot**, and offering software consulting.

Aegir — **France, Full Remote**
Full Stack Software Engineer | Defense - Strategic Planification | Permanent Contract — Oct 2025 – Sep 2026
- Reduced big data loading time by 98.8% (13,000ms ⟶ 150ms), from **Python** to **Godot**.
- Built CI/CD pipeline from scratch with Gitea runners, adding automated testing, linting, and formatting on PRs and pushes to main. Reduced team PR approval time by 30%.
- Set up local Docker registry, configured Nginx reverse proxy, and authored production Dockerfiles. Deployed Docker images and systemd services on-site, integrating Keycloak authentication and validating TLS certificates.
- Refactored map performance, reducing draw calls from 12000 to 5 (multimesh + custom instance shader).
- Ported a multi-window **Godot** application to a multi-tab web export, bridging JavaScript (**React**) and **Godot** with BroadcastChannel for cross-tab state, service, and dependency synchronisation.
- Peer review **Rust**, **React**, **Python** and **Godot** code.

Sogeclair Rail — **Adelaide, Australia**
Full Stack Software Engineer | Train Simulation | French V.I.E program — Sep 2023 – Aug 2025
- Handled thousands of messages per seconds to run at 60 fps between multiple **C++** modules, **Angular**, **Java** and **C#**.
- Maintained a **C++** and **Angular** distributed system codebase. My changes resulted in a 200% performance increase in database loading time, additional tracking metrics, and the implementation of a logging module, allowing us to reduce the mean time to resolution by an estimated 6 hours per week. And more!
- Delivered a Tram Project for Melbourne in **C#** with real-time AI behaviour handling hundreds of pedestrians, cars, and automated trams.

Ecole Centrale de Nantes · *Master Thesis Intern | Avatar Control using Eye-Tracking in VR (C#)* — Jan 2023 – Jul 2023
KTH Royal Institute of Technology · *Web Development Teaching Assistant (React / Vue)* — Aug 2022 – Jan 2023
Freelance · *Web Developer (Django, Firebase, Vue)* — Apr 2021 – Apr 2023
CLARTE · *Software Engineer Intern | Fast and Iterative Design In Mixed Reality with Unity (C#)* — Apr 2021 – Jul 2021

Education

KTH Royal Institute of Technology — **Stockholm, Sweden**
Master of Science in Computer Science - Human Computer Interaction — Aug 2021 – Aug 2023
- **Courses**: Web Development, Machine Learning, Computer Science, Entrepreneurship, UX Design
- **Projects**: Text Classification Using Ensemble Models (Machine Learning), Playable Toaster: Energy Awareness Game (Design)

Ecole Centrale de Nantes — **Nantes, France**
French Engineering School (Master of Science) in Computer Science - Virtual Reality — Sep 2019 – Aug 2023
- **Honors**: 4.0 / 4.0 GPA
- **Courses**: Virtual Reality Design & Interaction, Computer Vision and 3D Rendering, Computer Science

Research and Publications

What You See is What You Get: Exploring Novel Hands-Free Methods of Virtual Body Control for Avatars
Published on *IEEE* — Apr 2025

Skills, Languages, Interests

- **Languages**: French (Native speaker), English (Fluent), Spanish (Basic proficiency), Swedish (Basic proficiency)
- **Programming**: C#, HTML, CSS, Javascript & Typescript, Python, Rust, C++, SQL
- **Web Development**: Angular, React, Svelte, Vue, Node.js
- **Game Development**: Godot, Unity, GLSL and HLSL
- **Interests**: Video Games, Game Jams & Hackathons, Piano, Bouldering & Karate
